

Virtual tours: what we need from you

The website is built and ready to carry them. The platform, the booking and the production are ours to handle. Below is the part only you can provide — access, a few choices, and the files held by your architect.

1 — PROJECT BY PROJECT

What each of the nine needs

The nine are not in the same position. Four are finished and can be captured as soon as access is arranged. Three cannot be photographed at all until a show unit exists, so their tours come from the architect's model. Two are plotted land with no interior to walk through.

PROJECT	STATUS	WHAT THE TOUR WOULD BE	WHAT WE NEED FROM YOU
Happiness 1	Completed · 26 villas	Capture of a finished villa	Access to one villa, and the owner's consent if it is occupied
Happiness 2	Completed · 34 homes	Capture of a finished villa	Which of the eight villa types to capture — they differ in size and facing
Blessed	Completed · 21 apartments	Capture of a finished flat	Access to one flat, and whether 2 BHK or 3 BHK
Meraki	Completed · 9 apartments	Capture of a finished flat	Access to one flat — all nine are 3 BHK, so any is representative
Curve	Ongoing · 32 apartments	Rendered panoramas now; capture once a show flat exists	The architect's model, or a date for the show flat
H4	Ongoing · 51 villas	Rendered panoramas — with-lift and without-lift differ	The model, and whether both types are shown or one
V4	Ongoing · 24 apartments	Rendered panoramas	The architect's model
Fadal	Ongoing · 43 plots	No interior. A 360° from the site, or an aerial	Whether a land tour is wanted at all
Rare Earth	Ongoing · 279 plots	No interior. Site 360°, the entrance archway, the parks	Same — whether it is wanted

We need: the four choices above — the Happiness 2 villa type, the Blessed configuration, one or two tours for H4, and whether Fadal and Rare Earth get land tours.

Access, and the home on the day

These four give the quickest result — a tour can be live within days of the capture. Two things are needed from you for each.

Access

- One home per project, available for roughly half a day, uninterrupted.
- Written consent from the owner where a home is occupied.
- A single point of contact on site who can open up and stay for the session.

The home has to be styled, not just empty

This is the difference between a tour that feels premium and one that feels like an inspection. On the day, each home needs to be:

- **Furnished and dressed.** An empty room measures the same and sells far worse — a bare shell reads as unfinished however good the capture is.
- Cleared of site material, cabling, tools, packaging and personal clutter.
- Fully lit, including cove and under-counter lighting, with every bulb working.
- Curtains and blinds set the same way in every room.
- Empty of people for the duration — the camera records in every direction, so anyone present appears in the tour.

We need: who arranges access and by when, who is responsible for styling and cleaning each home before the session, and your approval to proceed with booking the capture.

What we need from your architect

These three cannot be photographed — they are not finished. Their tours have to be built from the 3D model. The Drive holds SketchUp files, which is the right starting point, but no browser or tour platform can read a **.skp** or **.dwg** directly. We need one of the two exports below. Your architect will know which is easier.

Either — 360° panorama renders

- Equirectangular, 2:1 ratio, **8192 × 4096 pixels minimum**; 12288 × 6144 if the renderer allows it. Anything smaller looks soft once it fills a screen.
- One viewpoint per room, camera at 1.6 m, plus the entrance approach and the balcony.
- Identical lighting and time of day across every viewpoint, or the tour flickers as the buyer moves between rooms.
- **Furnished, not bare shells** — the same furniture and materials as the marketing renders, so the tour and the brochure agree.
- 32-bit HDR or EXR files alongside the JPEGs if the renderer can produce them.

Or — the model itself

- A **glTF** or **.glb** export with materials and textures included, for a tour the buyer walks freely rather than jumping between fixed points.

We need: confirmation your architect can produce one of these, and which. It is a small piece of work for whoever holds the original files.

How the tours are labelled

A furnished show flat is not the flat a buyer receives, and a rendered tour is not a photograph of anything that exists yet. On a RERA-registered website, presenting either as the delivered home is a claim that can be challenged later.

Unless you direct otherwise, every tour will carry a plain label — *show flat*, or *rendered from the architect's model* — alongside the project name.

We need: your confirmation that this is acceptable, and for each completed project, whether the home we capture is a show unit or one that will be handed over exactly as seen.
