

Virtual tours: what we need from you

The website is built and ready to carry them. Everything below is what we need in order to produce the tours themselves, and the standard we would ask you to hold them to.

1 — THE DECISION THAT UNBLOCKS EVERYTHING

Which platform, and whose account

A tour is produced and hosted by a platform, which returns one link per tour. The choice affects cost, how the tour is captured, and how it feels to use.

PLATFORM	HOW THE TOUR IS MADE	WHAT IT GIVES THE BUYER
Matterport	Operator scans each room with a LiDAR camera	The most premium feel. Walk-through, overhead dollhouse view, and a measured floor plan.
iStaging	360° camera, or panoramas rendered from a model	Handles finished and unbuilt equally well.
Kuula / CloudPano	360° photographs or renders stitched together	Lowest cost. Point-to-point, without the dollhouse view.
Shapspark	Built from the 3D model, no camera involved	Free movement rather than fixed points. Best where only a model exists.

We need: which platform, whose account it sits under, and whether you are paying the platform directly or through a vendor who bundles it with the shoot.

Our recommendation, if the brief is a premium experience: Matterport for the four completed projects, because the dollhouse and floor-plan views are what buyers recognise as a proper tour — and rendered panoramas for the three still under construction.

What each of the nine needs

The nine are not in the same position. Four can be captured as soon as access is arranged. Three cannot be photographed at all until a show unit exists. Two are plotted land with no interior to walk through.

PROJECT	STATUS	WHAT THE TOUR WOULD BE	WHAT WE NEED FROM YOU
Happiness 1	Completed · 26 villas	Capture of a finished villa	Access to one villa, and the owner's consent if it is occupied
Happiness 2	Completed · 34 homes	Capture of a finished villa	Which of the eight villa types to capture — they differ in size and facing
Blessed	Completed · 21 apartments	Capture of a finished flat	Access to one flat, and whether 2 BHK or 3 BHK
Meraki	Completed · 9 apartments	Capture of a finished flat	Access to one flat — all nine are 3 BHK, so any is representative
Curve	Ongoing · 32 apartments	Rendered panoramas now; capture once a show flat exists	The architect's 3D model, or a date for the show flat
H4	Ongoing · 51 villas	Rendered panoramas — with-lift and without-lift differ	The model, and whether both types are shown or one
V4	Ongoing · 24 apartments	Rendered panoramas	The architect's 3D model
Fadal	Ongoing · 43 plots	No interior. A 360° from the site, or an aerial	Whether a land tour is wanted at all
Rare Earth	Ongoing · 279 plots	No interior. Site 360°, the entrance archway, the parks	Same — whether it is wanted

The capture standard we would ask for

This is the specification that separates a tour that feels premium from one that feels like a phone snapshot. Please pass it to whoever is booked for the shoot.

Camera

- **Matterport Pro3**, or a Ricoh Theta Z1 / Insta360 X4 if a panorama tour is chosen. A one-inch sensor is the floor — phone-based 360 attachments are visibly poorer on interiors.
- **HDR bracketing on, always.** Indian interiors are lit by very bright windows next to shaded corners. Without HDR the windows blow out to white and the room reads as cheap.
- Tripod, levelled, lens at eye height — about 1.5 to 1.6 m.

Coverage

- A scan position every 1.5–2.5 m, and in every room. Skipping the utility, the balcony or a bathroom is immediately obvious to a buyer.
- Entrance approach, every bedroom, both living and dining, kitchen, all bathrooms, balconies, terrace, and the staircase for villas.
- The shared amenities as well — the lobby, the park, the gym — not only the unit.

Condition of the home on the day

- **Furnished and styled.** An empty room measures the same and sells far worse.
- All lights on, including cove and under-counter. Curtains and blinds set the same way in every room.
- Shoot in a single session in consistent daylight — mid-morning or mid-afternoon, not across noon and dusk.
- Nobody in frame, no visible reflections of the operator in mirrors or glass, no site material or cabling left out.
- Air conditioners, fans and televisions switched off so nothing blurs between frames.

We need: confirmation of who is booking the operator, the dates, and who is responsible for styling each home before the shoot.

What we need from the architect

These cannot be photographed — they are not finished. Their tours must be rendered from the 3D model. The Drive holds SketchUp files, which is the right starting point, but no browser or tour platform can read a **.skp** or **.dwg** directly. We need one of the two exports below.

Either — 360° panorama renders

- Equirectangular, 2:1 ratio, **8192 × 4096 pixels minimum**; 12288 × 6144 if the renderer allows it. Anything smaller looks soft once it fills a screen.
- One viewpoint per room, camera at 1.6 m, plus the entrance approach and the balcony.
- Identical lighting and time of day across every viewpoint, or the tour flickers between rooms.
- **Furnished, not bare shells.** The same furniture and materials as the marketing renders, so the tour and the brochure agree.
- 32-bit HDR or EXR alongside the JPEGs if the renderer can produce them.

Or — the model itself

- A **glTF** or **.glb** export, with materials and textures included, for a tour the buyer walks freely rather than jumping between points.

We need: confirmation the architect can produce one of these, and which. It is a small piece of work for whoever holds the original files.

Five things to send us per tour

WHAT	EXAMPLE	USED FOR
Platform	Matterport	Confirms the link is genuine before it goes live
Tour link	https://my.matterport.com/show/?m=...	What appears on the page
What it shows	"the three-bedroom show flat"	Printed under the tour
Date captured	2026-10-02	Omitted for a rendered tour
Show unit or a sold home	Furnished show flat	See below

One decision we need from you. A furnished show flat is not the flat a buyer receives, and a rendered tour is not a photograph of anything that exists yet. On a RERA-registered website, presenting either as the delivered home is a claim that can be challenged. Unless you tell us otherwise we will label tours plainly — "show flat", or "rendered from the architect's model". Please confirm you are content with that.

What we need answered

1. Which platform, and whose account does it sit under?
2. Are you booking the camera operator, or should we source quotes in Mysuru?
3. For the four completed projects — who arranges access, and by when?
4. Who styles and prepares each home before the shoot?
5. Happiness 2 has eight villa types. Which one is captured?
6. Blessed has 2 BHK and 3 BHK. Which one?
7. H4 has with-lift and without-lift villas. One tour or two?
8. Do Fadal and Rare Earth get land tours, or none?
9. Can the architect export 360° panoramas or a .glb for Curve, H4 and V4?
10. Is there a budget per project we should design around?
11. Do you want a single *Virtual Tours* page listing every tour, as well as the tour on each project page?
12. Are you content with tours being labelled as show flats or renders where that is what they are?
